

Credit Card Customer Data Analysis Insights

1. Overall Performance

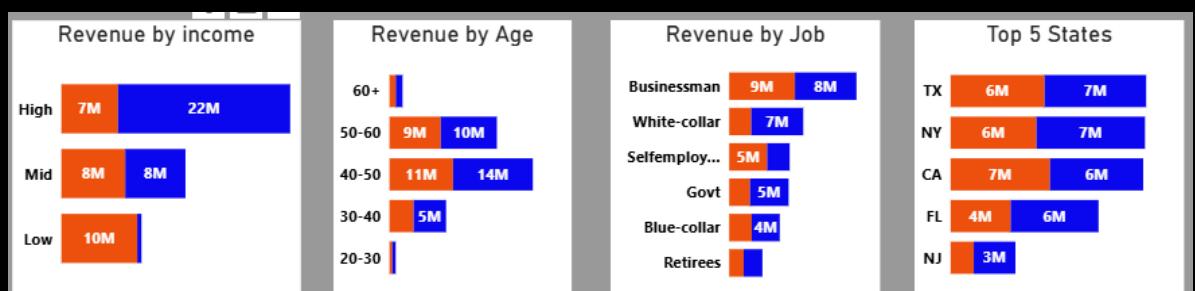

- Customers are making good income which facilitates more spending resulting into strong interest earnings for the company.
- However, the customer satisfaction score indicates there is a need for improvement in the service quality.

2. Revenue Trend and Gender-wise Contribution

- Male customers consistently generate more revenue than the female customers.
- Male customers contribute to 55% of total revenue.

3. Revenue by Categories

- Businessmen and White-collar workers are key revenue drivers.
- Women in low income group surprisingly seems to contribute more than the other groups i.e. \$10M, possibly due to higher credit usage.
- Middle aged customers (40-60) are the most profitable segments.
- Texas, New York and California are the most profitable states.

4. Job based summary

customer_job	Sum of Revenue	Sum of interest_earned	Sum of income
Blue-collar	6904279	9,52,800.57	72262158
Businessman	17387832	25,39,390.31	186959919
Govt	8111701	11,60,016.37	88773989
Retirees	4535184	6,30,359.24	48675030
Selfemployed	8261758	11,19,741.81	75313288
Total	55315410	78,43,382.23	575914439

- Businessmen are the highest income earners which is \$186.96M
- They are also the highest interest paying class i.e. \$25.53M.

Credit Card Transactions Data Analysis Insights

1. Overall Performance

Revenue	Amount	Total Interest	Count
55M	45M	7.84M	656K

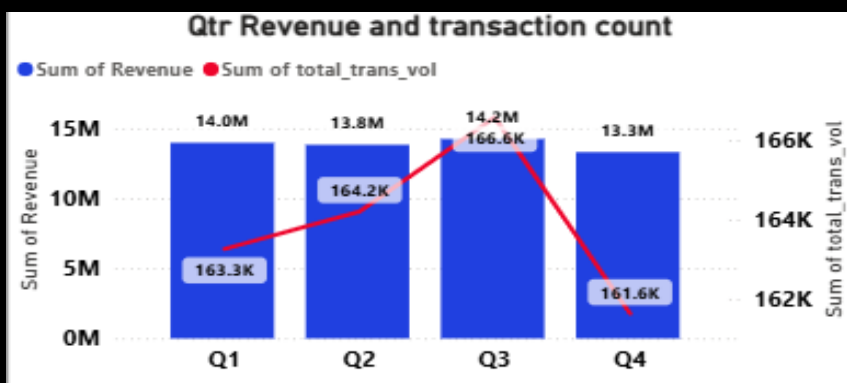

- Overall performance of the business is showing :
 - > Strong Revenue of \$55M.
 - > High volume of transactions i.e. 656K.
 - > Significant interest earnings of \$7.84M.

2. Card Category Performance

card_category	Sum of Revenue	Sum of total_trans_amt	Sum of interest_earned
Blue	46139398	36957875	64,95,887.74
Gold	2454072	2024078	3,73,784.16
Platinum	1135608	953314	1,61,629.05
Silver	5586332	4586746	8,12,081.28
Total	55315410	44522013	78,43,382.23

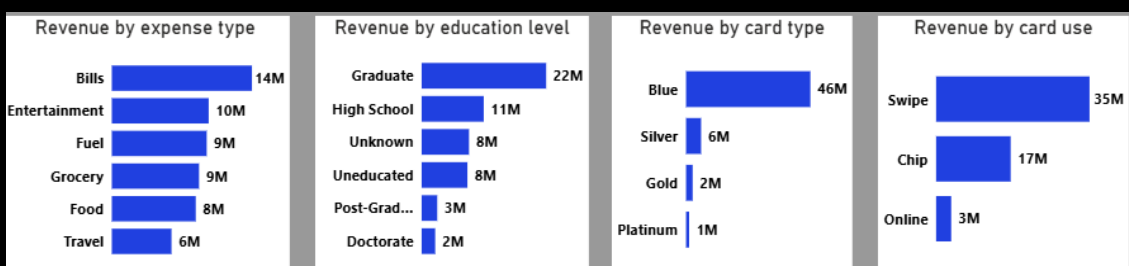

- Blue cards dominate this category with:
 - > Revenue of \$46.13M.
 - > Transaction Amount of \$36.96M.
 - > Interest earned up to \$6.49M.

3. Quarterly Trend

- Revenue remained fairly consistent across quarters (\$13M - \$14M)
- However, the third quarter was the peak in terms of revenue and card usage, possibly due to the festive season.

4. Revenue by Categories

- Most of the transactions are done for bill payments i.e. \$14M.
- Well educated people are the most who do the transactions, maybe because they are more financially literate and tech savvy.

- Blue cards are the most popular among users as it has been profitable by a wide margin of \$46M.
- It looks like physical use of card (Swipe/ chip) is more preferred than online usage.

Recommendations

1. Service quality needs to be improved to stay ahead of competition. We have to re-look at the fees charging strategy, bring more transparency in the billing process and re-evaluate our reward policy. We also need to strengthen our customer support team and enhance the digital experience of our customers. We can also start a referral program for customers.
2. Targeted marketing campaigns aimed at middle aged (40-60) premium customers located in Texas, New York and California states who are businessmen, businesswomen and men doing white collar jobs by giving them perks and custom services. Give more offers to women in low income groups as they are willing to use credit card more often than cash.
3. Targeted marketing campaign towards educated/ working people who are blue card holders. Give more offers like discounts or reward points to them on bill payments.
4. Give exclusive offers to users during the festive season as they tend to spend more during these times.
5. Tie-up with stores and restaurants where users most likely use the card for swipe payments where we can enhance their shopping or dining experience for every swipe payment made by them. This way we can increase our customer base organically in the long run.
